

Name of the project

- FIXED ASSET MONITORING SYSTEM WITH BARCODE

Goals of the project

The Project aims to improve the management and control of a company's fixed assets, which will lead to greater operational performance, cost control, and compliance. It offers a clearer, more accurate picture of an organization's asset inventory, facilitating improved resource allocation and decision-making.

Problems to be resolve

- Assets may disappear or be stolen, causing disruption and financial losses. The inability to see how assets are moving may be a factor in this issue.
- When staff members do not feel accountable for maintaining assets, accountability may be weak.

Expected outcome

- Asset is made affordable and effective by bar codes. Organizations can track the movement and location of assets in real time since each object is given a distinct bar code designation.
- Assets are assigned through bar-code systems to particular users or departments, encouraging responsibility.
